

Amendments to the Claims:

The following claims will replace all prior versions of the claims in this application (in the unlikely event that no claims follow herein, the previously pending claims will remain):

1. (Original) A system for forming information pertaining to a transportation device, the system comprising:

obtaining means arranged to obtain first information that is related to a person using the transportation device, and second information about a status of the transportation device; and

associating means arranged to create an association between the first information and the second information to thereby form the information pertaining to the transportation device.

2. (Original) The system as claimed in claim 1, wherein the obtaining means is arranged to obtain the first information and the second information from an information capture system that is remote to the obtaining means.

3. (Previously Presented) The system as claimed in claim 1, wherein the obtaining means comprises a communications interface arranged such that the obtaining means can obtain the first information and the second information from the information capture system.

4. (Original) The system as claimed in claim 3, wherein the communication interface is arranged to communicate with the information capture system using Ethernet.

5. (Previously Presented) The system as claimed in claim 1, wherein the associating means is arranged to create the association by assigning first data to the first information and second data to the second information, wherein the first data and the second data correspond substantially with each other.

6. (Original) The system as claimed in claim 5, wherein the first data and the second data each comprise a time date stamp.

7. (Currently Amended) The system as claimed in claim 1, further comprising a storage means arranged to store the first information, second information and the association.

8. (Original) The system as claimed in claim 7, wherein the storage means comprises a database.

9. (Previously Presented) The system as claimed in claim 1, further comprising access means arranged such that an entity can access the first information, second information and the association when stored in the storage means.

10. (Original) The system as claimed in claim 9, wherein the access means is arranged such that the entity can access the first information, second information, and the association from a device remote to the storage means.

11. (Original) The system as claimed in claim 10, wherein the access means is arranged to communicate with the device via an Internet.

12. (Previously Presented) The system as claimed in claim 1, wherein the first information comprises video audio information, and the second information comprises a direction, floor position, door status and mode of the transportation device, and fault related data.

13. (Previously Presented) The system as claimed in claim 1, wherein the first information further comprises related security information.

14. (Original) The system as claimed in claim 13, wherein the security related information comprises personal information.

15. (Previously Presented) The system as claimed in claim 13 wherein the obtaining means is arranged to obtain the security related information from an access control system.

16. (Previously Presented) The system as claimed in claim 13, wherein the associating means is further arranged to create an association between the security related information and the video audio information.

17. (Previously Presented) The system as claimed in claim 1, wherein the transportation device comprises an elevator, an escalator or a moving walkway.

18. (Original) The method as claimed in claim 17, wherein the second information comprises a direction, floor position and door status of the elevator.

19. (Currently Amended) A method of forming information pertaining to a transportation device on a computer system, the method comprising the steps of:
obtaining first information that is related to a person using the transportation device, and second information about a status of the transportation device; and
utilizing the computer system to create ~~creating~~ an association between the first information and the second information to thereby form the information pertaining to the transportation device.

20. (Original) The method as claimed in claim 19, wherein the step of obtaining the first information and the second information comprises the step of obtaining the first information and the second information from a remote information capture system.

21. (Previously Presented) The method as claimed in claim 19, wherein the step of obtaining the first information and the second information comprises the step of using a communications interface to obtain the first information and the second information from the information capture system.

22. (Original) The method as claimed in claim 21, wherein the communication interface is arranged to communicate with the information capture system using Ethernet.

23. (Previously Presented) The method as claimed in any claim 19, wherein the step of creating the association comprises the step of creating the association by assigning first data to the first information and second data to the second information, wherein the first data and the second data correspond substantially with each other.

24. (Original) The method as claimed in claim 23, wherein the first data and the second data each comprise a time and/or date stamp.

25. (Currently Amended) The method as claimed in ~~any~~ claim 19, further comprising the step of storing the first information, second information and the association in a storage means.

26. (Currently Amended) The method as claimed in claim 25, wherein the storage means comprises a computer-readable database.

27. (Previously Presented) The method as claimed in claim 25, wherein the method further comprises the step of accessing the first information, second information and the association when stored in the storage means.

28. (Original) The method as claimed in claim 27, wherein the step of accessing the first information, second information and the association comprises the step of accessing the first information, second information and the association using a device that is remote to the storage means.

29. (Previously Presented) The method as claimed in claim 19, wherein the first information comprises video and/or audio information, and the second information comprises a status and mode of the transportation device, and fault related data.

30. (Previously Presented) The method as claimed in claim 19, wherein the first information further comprises security related information.

31. (Original) The method as claimed in claim 30, wherein the security related information comprises personal information.

32. (Previously Presented) The method as claimed in claim 30, further comprising the step of interacting with an access control system to obtain the security related information.

33. (Previously Presented) The method as claimed in claim 30, wherein the method comprises the step of creating the association between the security related information and the video audio information.

34. (Previously Presented) The method as claimed in claim 19, wherein the transportation device comprises an elevator, an escalator or a moving walkway.

35. (Original) The method as claimed in claim 34, wherein the second information comprises a direction, floor position and door status of the elevator.

36. (Previously Presented) A computer program embodying the method as claimed in claim 19.

37. (Original) A computer readable medium comprising the computer program as claimed in claim 36.

38. (Canceled)

39. (Canceled)
